Organizational Announcement Head of Data Operations Development Units (DODU)

Dear Colleagues,

I am pleased to announce that Guillaume Breton is confirmed in his role as Head of Data Operations Development Units (DODU), effective September 1, 2018. Guillaume will continue to report operationally to me and will join as a permanent member of the Data Operations Leadership Team.

Guillaume joined Novartis back in August 2001, as a senior statistical programmer and has worked on several dozen submissions in multiple therapeutic areas (CVM, Dermatology/GI, NS, Resp) with a proven track record in statistical programming and project management.

Guillaume has held roles of increasing responsibility within Novartis and has been in a line management role since 2007. Most recently he acted as DO Development Units Director for Oncology. During this period, Guillaume helped to establish the Development Units' role and vision and successfully coordinated Data Operations deliveries for the Oncology Portfolio. He has also been the GPSII system owner between 2010 and 2017 and had important contributions in defining standards and reporting tools in the Data Disclosure and Data Sharing space.

Please join me in congratulating Guillaume on his appointment and wishing him the very best of luck.

Best regards,

Dermot Kenny

Global Head, Data Operations
